

Advantages.

Mounting the diagnosis module eliminates:

- The need for coordination of service calls between production and maintenance
- Recurring wiring costs
- Costs associated with press downtime
- Travel expenses for Ortlinghaus employees

Cost / Benefit Comparison

Return on investment in 8 to 12 months	Ortlinghaus labor costs for employee
	Ortlinghaus travel expenses for employee
Investment in drive diagnosis module	Wiring costs
	Press downtime costs
With drive diagnosis	Conventional status

Advantages for you after installation:

- Quicker return on investment
- Guaranteed press availability
- Predictable maintenance work
- Lower operating, maintenance and repair costs
- Diagnosis while production is still running

Ortlinghaus Drive Diagnosis

Drive Diagnosis.

Safety.

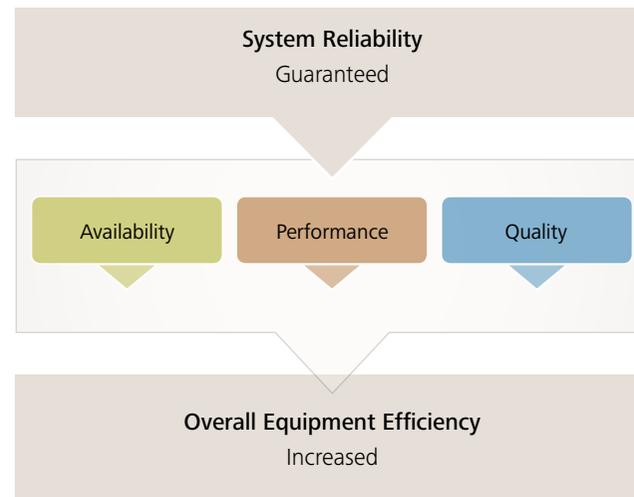

Ortlinghaus drive diagnosis is a service package consisting of a diagnosis module and software-based analysis by one of our service technicians.

The diagnosis module is an interface that can be mounted at any time on the press and then can be used to compare target and actual values for the following operating parameters:

- Pressure
- Speed
- Valve signals
- Reaction times

The diagnosis module can be mounted either by an Ortlinghaus service technician or your maintenance department. It makes it possible to evaluate the operating status of the press at any time – without stopping production.

The Ortlinghaus drive diagnosis increases system reliability without having to stop production.

Prevents unexpected machine breakdowns.
